FNB HACKATHON 2026 · ACCESS TO HIGHER EDUCATION

UniversityFlow: a quick start for judges

An AI companion for South African learners, from Grade 10 to graduation. Try it in three minutes.

THE LIVE APP · PRESS DEMO FOR JUDGES

universityflow.tumoolo.tech

NO PASSWORD NEEDED

WAY 1 · FASTEST

Try a made-up learner

Press **Demo for judges**, then **Try as Naledi** (or any of the six). You get your own private copy, deleted after 24 hours. Press **Switch learner** to try another.

WAY 2 · THE REAL SIGN-UP

Sign up as a new learner

Press **Sign up as a new learner (made-up details)** and use any 080 number. No SMS is sent: the PIN, and a guardian's link for an under-18, show on screen.

Three minutes, six things to try

Naledi, Grade 11	Open **My results**: the courses she is on track for and the close ones. On Home, press **See what I need**: the mark to aim for in each subject.
Thabo, Grade 10	Open **My subjects** and try another subject: see which courses it opens or closes.
Amahle, Grade 12	Open **Applications** and tick off UJ's checklist, then **Funding** for NSFAS.
Lerato, first year	Open **First week** and tick a step, then **My campus** for the campus tour.
Sipho, second year	Open **My modules**, then his first module: how it is marked, his DP, and the exam mark he still needs.
Anyone	Ask the chat, e.g. *"Am I on track for BSc Computer Science at Wits?"* or tell it you're stressed about exams.

What is real, what is made up

- Every learner, mark and report is made up. Uploads take only our SAMPLE reports.
- University facts come from each university's published pages. Many await a person's check and say **"Not yet verified"**.
- The chat is the real AI, with every safety check on.
- Nothing is sent to a phone in the demo: no SMS, WhatsApp or notifications.
- The study coach and portfolio show as **"Coming next"**.
- **Free means the app.** University costs (application and registration fees, tuition, residence) stay the learner's, paid by the family or through NSFAS or a bursary.

Also in our submission

- **The deck** (PDF): the problem with sources, a learner's story, the architecture, costs and who pays.
- **The demo video** (88 s): youtu.be/3-Z6S-iAxDI
- **The code**: github.com/tumoolo-tech/universityflow-fnb-2026
- **Built with**: Next.js 16, Expo (Android and iOS), TypeScript, Postgres, AWS Cape Town, Claude and Gemini behind one interface.
- **A three-minute guide** on the site itself: the link under the learners on the demo page.
